Learning Objectives

MedBridge
*Intervention Strategies for Children with Cerebral Palsy*
Linda A. Kliebhan PT, C/NDT

**Chapter 1: Definition of NDT**
- Discuss the operational definition of NDT

**Chapter 2: Enhancing Postural Stability and Its Role in Intervention Strategies**
- Describe the characteristics of posture and movement system musculature and central nervous system connections
- List key principles for facilitating postural control

**Chapter 3: Facilitation, Elongation, Inhibition, and Their Role in Intervention**
- Define facilitation and its role in intervention strategies
- Define direct and indirect elongation/inhibition and their role in intervention strategies

**Chapter 4: Facilitation, Elongation, Inhibition, and Their Role in Intervention**
- Understand the key elements of intervention including the development of a session goal, pre-test, intervention strategies and post-test in a child with cerebral palsy
