

## **Learning Objectives**

MedBridge

*Using Video Self-Modeling as a Therapeutic Tool*

Tom Buggiey, PhD

### **Course Objectives:**

- Participants will be able to score a passing grade in the post-course, online evaluation.
- Participants will be able to plan, film, and edit a 2 to 3-minute video using self-modeling.
- Given instruction in how to plan for a VSM movie, the learners will be able to construct storyboards for two individuals who need assistance in learning a task.
- Participants will be able to state 3 strengths and 2 weaknesses of VSM.
- Given the course instruction, participants will be able to state and explain 2 theories of learning that underlie the method.
- Participants will be able to state 3 caveats associated with filming children and create informed consent forms for use at their sites.
- Participants will write the names and explain the functioning of 2 alternate forms of VSM that have recently been developed.
- Given a word processor, the learners will be able to create forms for recording 3 types of data.
