Auditory - Perceptual Voice Evaluation

MedBridge

Auditory - Perceptual Voice Evaluation

Sarah L. Schneider, MS, CCC-SLP

Course Description:

How and when is an auditory-perceptual voice evaluation completed? Auditory-perceptual voice evaluation is used to assess vocal quality and ease of production through listening. It is imperative to have a standardized method for auditory-perceptual voice ratings for use during a comprehensive voice evaluation and to measure progress throughout the therapeutic process. This course will present methods for completion of auditory-perceptual voice evaluation and guidelines for use. The methods and guidelines will be presented through didactic lecture, demonstrations, and interactive auditory-perceptual ratings. At the end of the course the learner will understand the value and have the ability to complete auditory-perceptual voice evaluation as part of a comprehensive voice evaluation and to monitor progress in therapy.

Course Objectives:

At the completion of this course, the learner will be able to:

1. Identify auditory-perceptual evaluation methods to implement during comprehensive voice evaluation and to monitor progress through treatment.
2. Define parameters used to complete auditory-perceptual ratings.
3. Understand the value of developing and calibrating listening skills for auditory-perceptual voice evaluation.
