Learning Objectives

MedBridge
Clinical Reasoning in Pediatric Occupational Therapy
Tracy Stackhouse, MA, OTR

Course Objectives:

- Identify your own strengths, tacit knowledge, and approach, and consider how these inform your clinical reasoning process
- Determine where to focus your own professional growth for improved clinical reasoning and client outcomes
- Discuss the importance the clinical reasoning process that includes moving between levels of analysis in establishing evidence based treatment plans
- Determine how sensory, motor, and affective processes underlie many adaptive functions and how to best link these foundations to adaptive outcomes in higher level occupational performance
- Integrate information from a variety of sources to establish evidence informed interventions
