Minimizing the Use of Antipsychotics in Long-Term Care

Elizabeth Galik, PhD, CRNP, FAAN, FAANP

Course Objectives:

- Contrast the efficacy and risks associated with antipsychotic medication use among older adults, particularly those with dementia
- Identify common challenges associated with gradual dose reduction of antipsychotics in long-term care settings
- Discuss a quality improvement process that can be utilized by the interdisciplinary team to reduce the use of antipsychotics among older adults in long-term care settings
