Learning Objectives

MedBridge Education

Part A: Functional Treatment Ideas and Strategies in Adult Hemiplegia
Jan Davis, MS, OTR/L

Upon completion of this course, the online learner will be able to:

- Name the 5 phases described in “The Process Used to Select Functional Tasks” in the correct order
- List 3 necessary therapeutic skills used to identify key problem areas during the Clinical Reasoning phase.
- Identify asymmetry of the trunk and limbs in at least 2 stroke survivors observed during the Evaluation phase.
- Identify 3 important components of posture when working with patients in sitting
- Write treatment goals with outcomes that meet the standards of third-party payers
