# Learning Objectives

MedBridge Inc.

*A Distinctive Approach to Pediatric Toe Walking*

Liesa Persaud, PT, DPT, PCS, CKTP

Upon completion of this course, participants will:

## Chapter 1: Why We *DON'T* Want to Wait

- Explain the outcomes of delayed intervention from a dynamic systems approach
- Identify the ramifications of incorrect intervention
- Increase comprehension of the necessity of timely and accurate management of pediatric toe walking

## Chapter 2: How Can We *USE* this Information

- Describe the evidence related to toe walking
- Describe the evidence related to ideal gait
- Apply research findings from a clinical perspective

## Chapter 3: *BEYOND* Heel Cord Stretches

- Utilize correct biomechanics to better understand stability during ambulation
- Gain insight into the contributions of the sensory systems during gait
- Recognize when a child has impaired biomechanics and/or sensory function that is negatively affecting their gait
