The Hip: Assessment of Hip Injuries in Athletes

Mike Voight, PT, DHSc, OCS, SCS, ATC, FAPTA
Ashley Campbell, PT, DPT, SCS

Upon completion of this course, learners will be able to:

- Describe the anatomical structures and biomechanical factors as they pertain to hip pathology
- Discuss the common differential diagnosis for pain around the hip
- Describe the diagnostic process for identifying and classifying hip injuries
- Present an evidenced-based systematic examination for the hip
- Present an organized physical examination consisting of pertinent tests and measures to identify hip pathology
- Discuss evidence-based functional assessment and pain provocation maneuvers to evaluate potential hip pathology
- Describe the routine radiographic tools and evaluation strategies utilized in the diagnostic process
- Describe the most common imaging projections and radiologic observations utilized in the diagnostic process
- Describe other common imaging studies utilized in the advanced diagnostic process
