

Learning Objectives

MedBridge in Collaboration with GSO

Putting the 'FUN' in Functional: Regaining Balance, Mobility, and Strength

Danielle Keyser, MS, LOTR, GTC

Upon completion of this course, participants will:

Chapter 1: Reassessment

- Understand the importance of reassessing patient status with objective measures and functional measures to determine efficacy of occupational therapy treatment, and to determine need for daily modification of treatment tasks
- Increase the use of specific objective measures to dose exercise, provide evidence based treatment, and provide concrete evidence of progression to patient

Chapter 2: Treatment/Monitoring of Performance

- Understand the importance of instructing in physical components of a functional task, with follow up of actual activity performance to ensure generalization of task performance
- Understand the importance of periodic monitoring of physical capacities and client feedback of performance throughout session for consistency and safety
- Understand the importance of family and social support for follow through outside of the therapy session

Chapter 3: Planning for Further Sessions

- Understand the importance of providing specific and concrete feedback to the client regarding status, strengths, opportunities for improvement in the daily treatment session, and in relation to the duration of the treatment plan
- Understand and verbalize to the client the relationship between session performance and the advancement of the client's long-term functional goals and participation
